SUMMARY

Junior Data Engineer & Scientist with 1+ years of experience in data preparation, cleaning, analysis, visualization, and predictive modeling, combined with project coordination and workflow management. Skilled in project planning, ETL processes, workflow automation, and integrating cloud solutions to improve efficiency and scalability. Strong problem-solver with a passion for transforming raw data into actionable insights and supporting successful project delivery that drives business decisions.

WORK EXPERIENCE

Data Scientist Intern , ALX Africa

Mar 2025 - Jul 2025

- Designed efficient, scalable database schemas using SQL to support clean data organization and fast query performance.
- Co-planned and collaborate in designing instructional modules for data analysis training.
- Reviewed peer-authored modules to ensure alignment with ALX standards.

Electrical Apprentice, Nampak Bevcan

Jan 2020 - Oct 2022

- Assisted senior electricians with diagnosing and repairing beverage can-making machinery, reducing equipment downtime by 10%.
 - Supported inspections, repairs, and preventive maintenance to improve machine reliability.
-

EDUCATION

July 2024 - July 2025

Occupational Certificate: Data Science (NQF Level 5)

ExploreAI Academy

Completed Curriculum: Awaiting final external examination(QTCO)

Electrical Engineering (N1-N5)

Jan 2016 - Jul 2018

Denver Technical College

CERTIFICATIONS

AI-102 Azure AI Engineer Associate - Microsoft

MLOps Zoomcamp - DataTalks.Club

AWS Cloud Bootcamp - Cloudsec Network

Electrician Trade Test - NECSA Learning Academy

SKILLS

Python | Pandas | Scikit-learn | TensorFlow | NLP | NumPy | SQL | PowerBI | AWS | AZURE |
ECS/EC2 | S3 | RDS | Lambda | RDS | ETL | MLOPs | AI | Docker | Prefect | Googlesheets |
Github |

PERSONAL PROJECTS

ETL Pipeline for Business Reporting

Fully automated data pipeline powering an AWS-hosted data dashboard | Showcasing Data Engineering + Business Intelligence

- Developed and deployed a fully systematized ETL pipeline with weekly data refreshes, integrated into a BI dashboard for streamlined business insights, leveraging AWS infrastructure and Prefect Cloud.
- Implemented ETL flow monitoring and notifications for successes and failures to ensure operational reliability.
- Implemented retries on data processing tasks to ensure pipeline resilience and reliability.

Solar Radiation Forecasting Using an End-to-End MLOps Pipeline

Built a solar radiation forecasting system using NASA weather data, with automated model training and monitoring.

- Leveraged Prefect Cloud for workflow orchestration, and used Docker Compose to manage API and monitoring services.
- Tracked experiments, model versions, and parameters using MLflow, with the MLflow server hosted on AWS EC2 for scalable, remote access.
- Automated storage of model artifacts, experiment results, and monitoring reports in AWS S3 for durability and easy retrieval.
- Used Terraform to provision and manage AWS resources, ensuring reproducible and scalable cloud infrastructure.
- Integrated Evidently AI and custom statistical tests for drift detection; exposed drift and RMSE metrics via Prometheus for real-time monitoring in Grafana.
- Logged model predictions to Supabase (PostgreSQL), enabling flexible SQL-based querying of model input data.

Fuel Consumption Prediction

Fuel consumption analysis and prediction.

- Performed exploratory data analysis on fuel economy factors; observed higher consumption in cars with more cylinders and greater engine displacement.
- Found that city driving results in higher fuel consumption compared to highway driving.
- Trained a model that achieved an RMSE of 2.46, indicating that predictions are, on average, only off by 2.46 MPG.
